

Meta-Analysis: Call for Unpublished Data on the Fundamental Dimensions of Social Cognition

Dear colleagues,

We are currently conducting a meta-analysis of three fundamental dimensions of social cognition: **sociability, morality, and competence** (or agency). We have already identified a number of published studies on this topic and we are now looking for unpublished data.

If your study used a multi-item measure that pertained to sociability (exemplary items: likeable, warm, friendly), morality (exemplary items: honest, sincere, trustworthy) or competence-agency (exemplary items: competent, intelligent, skilled) we would be very grateful if you could share with us your unpublished or soon to be published data (including manuscripts and theses). We will only use the data for the purpose of the meta-analysis and your data will be deleted after the meta-analysis is completed.

You can reply to this email with the anonymized raw data (or clean data, if you applied any transformations), preferably in .csv or .sav format, along with a codebook or any other information required to determine variable coding (in English).

Alternatively, if you do not wish to share your data, we could send you a google sheet where you could input the required information concerning measurement, sample, study design, and statistics.

If you have data that match the content of this call please email me by March 29th, 2019 at nszostak@swps.edu.pl.

Thank you for your time and for considering our request.

Kind Regards,

Natalia Szostak
